- Control software for teleprompter systems.
- Management of all the necessary elements for a complete assisted voiceover.
- Organization and edition of texts in grids for their sequential launch.
- Management of multiple input devices for complete control of text speed.

COMPLETELY UNICODE SYSTEM

TVPROMPT MOS offers you all kinds of on-screen information so that you always have the time of the speech controlled. Counters on the control screen and on the prompter screen (with remaining time estimation until the end of the news item depending on the duration and speed defined), recommended speed bars, elapsed time counters and remaining time from the beginning of the playback until its completion. All this offers a powerful system that will assist you reliably and safely at all times.

System improved with various add-ons: configuration and storage of favorite feeds, speed of passage of headlines on screen, optionally display prompter texts in capital letters, and so on.
